

# Maintenance Performance Toolbox — Authoring

Commercial Services

# Authoring

In daily maintenance, mechanics are tasked to use maintenance documents published by manufacturers, airlines, and/or third parties to complete a single task. These documents are not integrated and reside in different formats. Not having all the information in one publication is time consuming, prone to errors, and increases maintenance cost. The solution —Maintenance Performance Toolbox Authoring module.

Whether you have Boeing, non-Boeing, or a mixed fleet, the Authoring module provides the ability to modify manufacturer maintenance documents. It integrates airline or third-party-generated data with manufacturer maintenance documents for ease of use while providing complete publishing control.

---

## Incorporating Airline Best Practices to Optimize Efficiency

### The Authoring module helps you to:

- Make in-line changes to original equipment manufacturer (OEM) documentation
- Incorporate your supplemental documents into the OEM content seamlessly
- Identify supplemental data and customer-originated changes
- Safeguard publishing of customized documentation by defining a multi-step approval process
- Control when to publish customized content (publish immediately or schedule it for later)
- Reconcile revisions effortlessly with just a couple of clicks

### Key benefits

- Access one application to author Boeing and non-Boeing maintenance manuals
- Have complete maintenance information in one publication
- Improve efficiency in finding and managing maintenance information
- Maintain complete control of content and the approval process
- Have a thorough approval process completion prior to publishing content
- Receive automated notifications throughout the approval process
- Can access customized data on Toolbox Remote\* and Toolbox Mobile Library\*\* at the airplane
