

737 Pre-qualified G2 Installation Kit

A pre-qualified solution enabling fast airplane transitions

4-Month lead time

Enables fast airplane transitions

Pre-engineered solution

EASA certification with FAA validation

Modular galley configurations

Flexible galley insert options

Available for retrofit on the 737 MAX and 737 NG, the G2 Installation Kit is designed to be a cost-effective and flexible solution. The offer includes parts to support the installation of a full size G2 Galley, including the innovative G2 Adaptable Galley System (AGS). The G2 galley is Buyer Furnished Equipment. Upgrading to this full size G2 galley is often done concurrently with the highly desirable 737 Maximum Passenger Reconfiguration. This pre-configured solution available within 4 months is an ideal solution for airplane transition.

The G2 Adaptable Galley System (AGS) from Boeing Encore offers a method of customization through pre-qualified configurations which include standard units, ovens, stowage, waste, and other areas, as well as features such as USB, mirrors, additional crew handles, and more.

This modular approach enables shorter lead times and cost-effective solutions for customers who want the cost-savings of a pre-qualified product, while still having the options and flexibility to best suit their airline operations.

G2 S/L - Available with Encore AGS
or alternative galley supplier
