

# Boeing Commercial Parts Exchange Programs

Keep operations running smoothly with fast, reliable access to the parts you need—without unnecessary overhead

## Boeing Commercial Parts Exchange Programs

### Navigate maintenance more efficiently and cost-effectively

Keeping just the right amount of inventory on your shelves is crucial to meeting your schedule and budget. But managing large, high-value spare parts, and storing them until they're needed, presents your airline with a significant operational hurdle. Meanwhile, the alternative—scrambling to chase down parts from suppliers around the world— isn't any easier.

You need a better option to help manage your fleets' maintenance.

**With Boeing exchange programs, you've got one.**

We offer four unique programs to choose from, all designed to give airlines a route to simpler, streamlined inventory management. Participate in one or all for a sustainable maintenance model that can drive more cost savings and efficiencies—while reducing your carbon footprint.

**Transactional lease and exchange,** for ad-hoc or one-time needs

**Aerostructures exchange,** for crucial flight controls and nacelles

**Landing gear exchange,** to meet the scheduled overhaul requirements

**Component services program,** for quick access to selected high-value, dispatch-critical components

In each program, Boeing helps support part repair, overhaul and the associated project management, saving you money and ensuring you get the parts you need on time. Boeing works closely with you to identify the right programs for your needs and where you operate, helping you be more efficient with spend and utilization.

With Boeing, you gain a partner you can trust. Backed by our years of industry experience, unparalleled OEM knowledge and engineering expertise, you can maintain exceptional quality—even when requirements change.

**We're here to help you get the parts you need, so you can focus on operating your airline efficiently.**

# Transactional Lease and Exchange

## Your one-stop solution for emergent needs or ad-hoc requirements

This program is designed to support inventory needs for all Boeing aircrafts. Your airline only pays when you need a service, and there are no exclusive or long-term agreements required—giving you more flexibility to exchange and lease parts as needed.

Boeing overhauls and re-certifies. That means that every part you receive is backed by Boeing's commitment to quality and OEM expertise.

### At a glance

Support for 25,000+ aircraft components

Services for flight control surfaces, engine cowlings, landing gear doors, and more

Available 24/7

## Landing Gear Exchange

### **A cost-effective option that keeps landing gear replacement on schedule**

Landing gear parts are some of your airline's most crucial—and with such a long lead time, as well as stringent regulations, you can't afford any interruptions to your schedule.

Boeing has a pool of gears available and takes care of everything, including project management, parts acquisition, engineering, repairs, certification, MROs and technical issues. You no longer need to contract, schedule and manage the overhaul process yourself. You'll receive gear that's certified according to the latest requirements.

Currently, this program serves 737, 747, 777 and 787 models, with emergent access to landing gears for 787 and 747-8 only.

To participate, airlines pay an exchange fee before accessing gear from the Boeing pool. Your airline receives Boeing-certified exchange gear for you to install, which you can pick up at the nearest approved Boeing facility. Then, you ship gear that needs repair to Boeing so we can recertify and replenish our pool.

## How your airline benefits

### Quick turnaround

You receive instant access to Boeing's global network ensures fast component replacement, minimizing aircraft downtime.

### Improved sustainability

Reduce your carbon footprint by extending the life of landing gear components and reducing additional gear purchases required to perform in-house overhaul and repairs.

### Simplified AD/SB management

Boeing assumes the work to manage records required for the R&O process and recertification, so you don't need to.

## What's included?

### Main landing gear

- Main component assembly
- Truck component assembly
- Side and drag braces
- Actuation

### Nose landing gear

- Main component assembly
- Drag brace assembly
- Actuation

### Installation kits

- Actuation
- Hydraulics
- Electrical
- Uplock assembly
- Semi-lever actuator (777-300ER only)

# Aerostructures Exchange

## Ready access to essential flight control components and nacelles

As the OEM for all your Boeing Aerostructures components, we know more about them than anyone else—so there's no better partner than us to help.

This program provides access and cost savings for dispatch-critical components including flight control surfaces and nacelles. Airlines pay a monthly fee to participate and to ensure the right parts will be ready when needed.

## How your airline benefits

### Increase capital efficiency

Reduce your provisioning expenses (more than \$20M per shipset!) to support a capital-efficient entry-into-service solution.

### Avoid interruptions

Working with Boeing means you can transfer inventory and repair turnaround liabilities, like obsolescence or excess inventory, to us.

### Choose from a bigger regional pool

Access to Boeing's expanding network of repair stations and warehouses means you can return your airplane to service quickly.

## Component Services Program

### Efficient repair services for high-value, line-replaceable parts

This program is designed to give airlines a way to better manage component inventory costs without compromising airplane dispatch reliability. As a program participant, you receive access to a comprehensive pool of aircraft parts that are available to ship within just hours of the request.

Boeing and our MRO partners have hundreds of parts stored and ready to ship—parts you no longer need to source, purchase, or store yourself.

## How your airline benefits

### Reduced downtime

Get airplanes into service faster with lower lead time by providing parts when you need them.

### Reliable, widespread support

Boeing's global services reach more destinations to provide help where your airplanes are.

### Better budgeting

This program makes it easier to reduce capital costs and predict spend, making your long-term maintenance planning more effective and straightforward.

**500+**  
parts ready to ship

# Why Choose Boeing Commercial Parts Exchange Programs

Exchange programs give you access to a pool of parts without the upfront capital investment. Boeing takes care of overhaul and puts the part back in the pool for the next customer that needs it, making these programs a highly valuable option for every airline.

**Capital savings** with lower inventory and storage needs and predictable pricing

**Time savings** through ready access to the right parts and reduced overhead management

**Sustainability** with local Boeing warehouses that keep parts closer to you, reducing costs and carbon emissions

**Quality** from Boeing's industry expertise, capabilities, innovation, and engineering support

**Global coverage** to support our customers where they need us

## We supply—you fly

A reliable and effective option to help you better manage fleet maintenance, Boeing exchange programs are built to help airlines minimize inventory, lower costs and improve aircraft reliability and availability. Our goal is to help you do what you do best: operate your airline.
