BOEING

Service above and beyond

Engine Buildup Services

Experienced, quick assembly for your spare engines

The engines on your new airplanes were built up by specialists at Boeing. Now, you can benefit from that expertise and have the same professional team build up your spare engines with Quick Engine Change (QEC) kits from Boeing Spares. The kits contain the same original equipment manufacturer parts that are installed on the factory floor.

Why Boeing?

- Easier for you
- Experienced installations
- Tailored use of spares
- Quick turnaround

Tailored use of spares

We will build up your engine using a full or partial QEC kit, depending upon the parts available in your inventory. All your used parts are thoroughly inspected and, if needed, we will coordinate cost estimates for the repair-or-replace decision.

Quick turnaround

We typically have a flight-ready engine within five days upon receipt of the engine. We can accommodate your unique requirements, whether for a scheduled maintenance or an unplanned removal. When your airplane is grounded, our AOG team will travel to the site and return your aircraft to service in minimum time. We can transport the engines to or from your desired location.

Easier for you

You order the kit and install service, we handle the rest:

- Order and take receipt of all parts
- Complete all required certification paperwork
- Ensure airworthiness
- Arrange for export compliance
- Package the completed engine for shipping

Experienced installations

With 90+ years of engine build up and propulsion engineering experience, we provide a cost effective solution that allows you to optimize your maintenance capacity and capability.
